PSEUDO-NETWORK WHITEPAPER

Pushing Cryptocurrency into the Next Generation

WHITEPAPER TABLE OF CONTENTS:

OUR MISSION

Our mission for The Pseudo Network is to develop a utility, resource, and communication platform for cryptocurrency investors and enthusiasts. To accomplish this, we are developing a network of programs that guides and assists users through their navigation of the various blockchains and offers unique applications to make their tracking, data collection, and investing decisions come easier.

The primary goal of our platforms and networks are to expand the reach of cryptocurrency by overcoming the largest problem facing its implementation in day-to-day life; A lack of knowledge and ease of use applications. While cryptocurrency is slowly becoming more mainstream, many are still uninformed on the basic principles such as how coins are made and operated, what they are used for, and the purpose of investing in them in the first place. We plan to release constantly updating and expanding video and graphic tutorials on how to buy, navigate, trade, track, and grow your crypto assets.

While our network and programs will help elevate the understanding of new and potential investors to bring more attention to the future of currency, we also aren't forgetting those of us who have been here since the beginning. With a wide array of tools such as charts, wallet tracking, a capital gains calculator, and a mobile friendly app, even the most experienced traders will find their market anxiety is eased, while utilization and interactions with the market is streamlined.

DRIVING IDEOLOGY

In order to see our goals and mission through, we have a strong business ideology that lies upon the values of community and the empowerment of the people through the increased utilization of cryptocurrency. Conventional currency has long been controlled and manipulated by governments, nations, banks, and the exorbitantly wealthy. Cryptocurrency has posed a challenge to these establishments, and every year its adoption grows even as legal challenges and attempts to shut off trading continue from nations worried about losing their influence over the average person. We seek to develop a strong, trustworthy, and useful network to increase the availability of crypto to all.

Above our applications, network, resources, and all else, community is our most important asset. Regardless of if someone is an active member on Telegram or Discord, occasionally shares our videos or posts, supports our continued growth, or simply has bought our token and held it, they are an essential piece in the machinery that keeps us moving and evolving.

TOKENOMICS

Total Supply: 10,000,000 (10 million)

Marketing Funds: 200,000 Tokens (0.02 of total supply)
*Marketing will be drawn slowly over time to ensure consistent progress and exposure for our network and holders. Will be used for ads, giveaways, rewards, and more. Marketing funds go directly to improving the overall network and coin success.

Locked Dev Wallets: Devs will each be rewarded 44,445 coins (0.0045) for their months of contribution and hard work to the project, and continued work in the future. Dev wallets will be locked for three months and developers will be unable to sell large quantities of their tokens at a time as per our LLC operating agreement.

Finally, we have the burn function which will institute a 6% fee on every transaction to incentivize holding and deter swing trading.

This will take place in the form of a:
- 3% Distribution to holders
- 1.5% Lock to Liquidity
- 1.5% Burnt

APPLICATION AND FEATURE OVERVIEW

We are aiming to implement and support a variety of applications and features to give users the resources they need to feel informed and comfortable in their investments. Currently, we are working to develop these key features:

1. Video and Graphic Tutorials: Expand your knowledge of what cryptocurrencies are and what to do with them

2. Wallet Tracker: Track and monitor your assets by connecting directly to your wallet

3. Charting System: Modern, user friendly, and interactive chart that provides accurate information without constant bugs

4. Market Trends: All time highs and all time lows of coins/tokens, biggest gainers and hardest losses of the day

5. Excel Coin Tracker Template: A handy tool that can be used to *estimate** capital gains/losses and track value over time

6. Mobile Application: Crypto access in your pocket, for whenever you want to check on your assets.

*A detailed breakdown for each feature can be found later in the whitepaper

VIDEO TUTORIALS

There is currently a massive influx of new investors looking to growth their wealth and gain financial independence through cryptocurrency investments. A lot of these potential investors are unknowing or even misinformed about the nature of cryptocurrency and how they operate. There is still a staggering amount of people who are unfamiliar with Bitcoin, despite its exponential growth.

Furthermore, there is a steep learning curve when trying to become comfortable with buying coins, handling transactions, staking, pooling, securing wallets and other functions often required to do. There's always the lurking fear of forgetting a digit and watching as your transaction disappears forever into the blockchain.

Our tutorials, videos, and infographics aim to enhance our users knowledge and comfort of navigating the various blockchains. We plan to incorporate videos on all the largest platforms and commonly used trading, buying, and tracking resources including our own Pseudo Network.

We intend to Include in-depth video breakdowns, quick graphic tutorials, blog style writings, and more covering a wide range of topics.

WALLET TRACKER

Checking your asset balance in cryptocurrency should be as easy and safe as checking the cash in your pocket.

Connecting to our tracker will be the ideal balance tracker, showing you the amount of coin you hold and its equivalent dollar value. You will also get the options to favorite coins that you wish to stay constantly updated to the prices on. Staying informed and up to date is the best way to ensure you are maximizing your potential profits.

As an additional feature, we are creating the ability for traders to set notification alerts on coins of their choice to notify the holder if they reach or fall to a certain amount. For example, a user could set a notification to alert them if a value of a coin they are holding such as Pseudocoin hits a certain amount. The user could then have immediate knowledge of the value of the asset if they had a goal cash out in mind.

This is an extremely valuable tool due to the heavily volatile market of cryptocurrency, especially on the Binance Smart Chain. In the case of a heavy climb in price followed by a large dip, our notification system could be the determining factor on being able to sell for exactly the amount that you were aiming for. We all have goals, and our system would allow the user to tailor it to their specific needs.

We also plan to implement a "recycle bin" where users can remove their unwanted coins that were rug-pooled or crashed to near zero. This will help keep wallets clean and organized and remove some of the clutter than can accumulate from BSC trading.

CHARTING SYSTEM

One of the most important tools for market prediction, the charting system is the go-to tool to see how tokens have been performing in the past and how they may look in the future.

Our charting system aims to provide users with the most information possible while still retaining a sleek look and being user friendly. Market cap, trading price, buys and sells, volume, and more will be easily digestible and presentable to users.

Interactive tools are also built directly into the chart, so no external programs need to be used to draw, type, or likewise interact on our chart. Perfect for the market speculator looking to create the next viral trend graph on Reddit.

MARKET TRENDS

Market trends are a great tool to allow analysts and enthusiasts to predict and attempt to benefit from the market movements of coins. Many types of coins and tokens follow similar trends, and the market overall is often tied to the movement of Bitcoin. Utilizing market trends we hope to give the user the ability to gauge the possibilities of the future markets.

We plan on tracking the overall market movements as well as the all time highs and all time lows of individuals coins, allowing users to track the growth and development of their favorite coins over time.

With this you be able to quickly gauge how your coin is doing at the moment compared to how it has performed in the past.

EXCEL TRANSACTION TRACKER: TAX ESTIMATOR

We all want to keep track of our profits or losses over time, and at the end of the fiscal year it becomes something that you need to know if you plan on cashing out and reporting it to the government. Cryptocurrency is taxed by most states and governments as capital gains or income, so most will find themselves in this position.

Our Excel Tracker and Estimator hopes to provide a well optimized, clean layout that will connect to the users wallet, scan their transactions, and gives the value at the start of the fiscal year or wallet, as well as the current value of the assets. There will also be the option to select your US state and enter in a "cashout" amount that will give you an *estimate* of your capital gains taxes due for your specific state and federally. This way, a user with an estimated wallet balance of $15,000 could enter the amount in the "cashout" box and receive a quick estimate of what they may be looking to owe.

While this tool will be developed primarily for tax estimation, it is also a useful tool to track and monitor the growth of all of your assets on a single document. Simply connect your wallet to the system, and downloaded the generated excel sheet data.

*PsuedoNetowork is **NOT** a financial institution and we do not offer tax, financial, or investing advice. The purpose of the estimator is to do just that, estimate your amounts and is not to be taken as a direct tax figure.

Mobile Application

Our mobile app aims to further our reach and allow users to have access to many of the features that they would normally enjoy on our website. With plans to launch on both IOS and Android, we will look to emerge as a competitor app to many of the current cryptocurrency apps emerging.

Many mobile apps are clunky, hard to use, or buggy to the point where it's simply unusable. We aim to provide the highest quality, premium app that performs well and looks just as good as our website with many of the features transferred over.
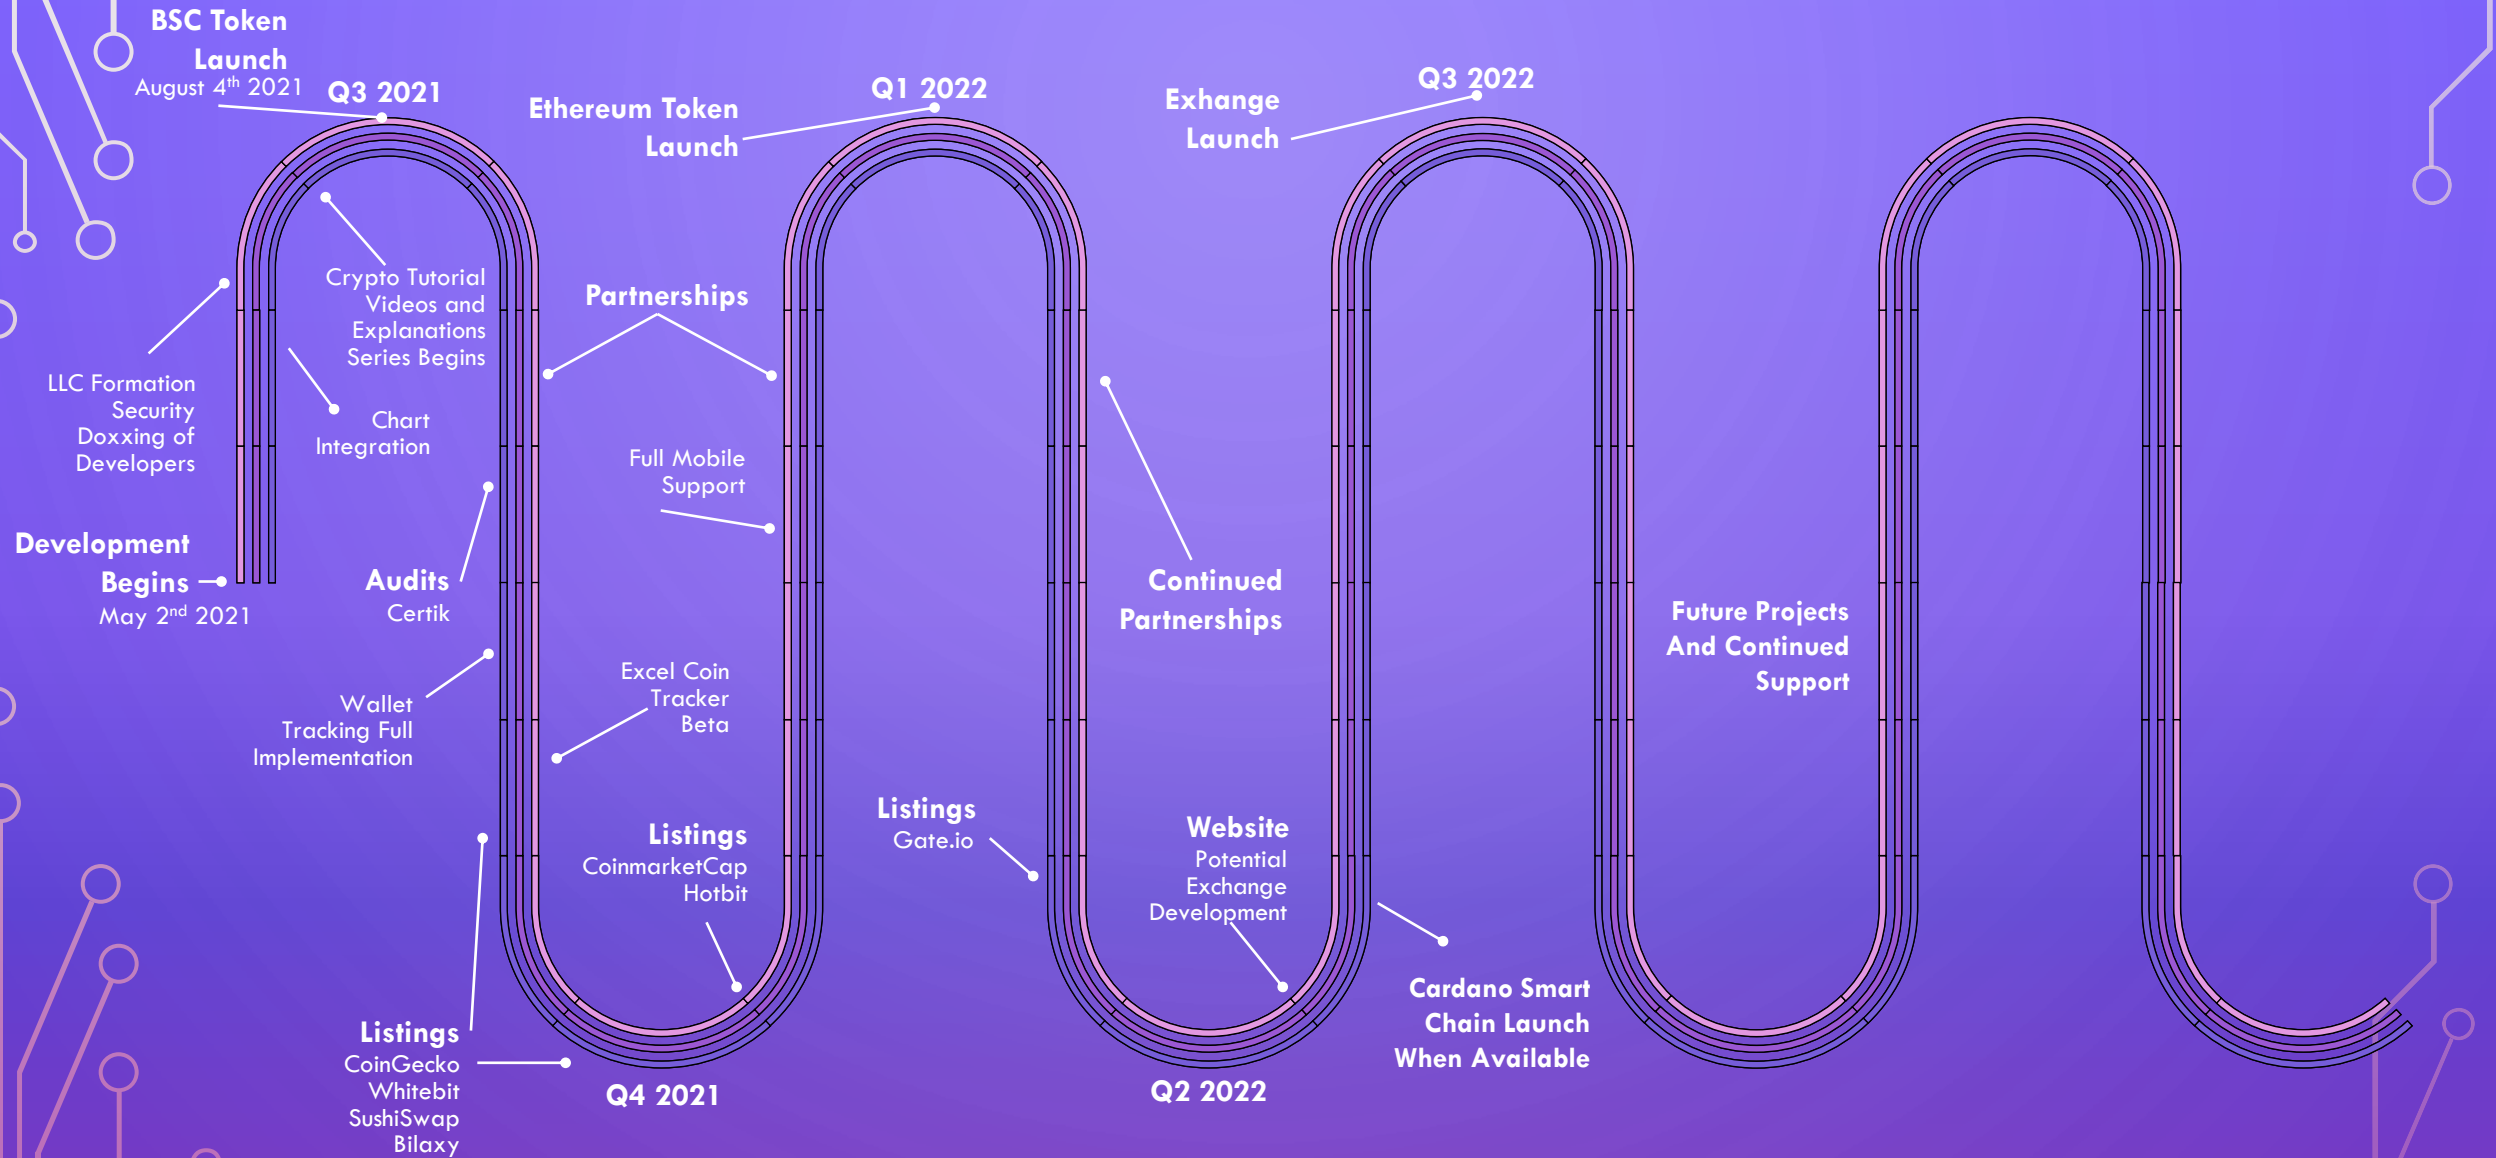

Marketing Plans

Marketing and outreach is the main success factor of many coins. Accordingly, we are planning marketing techniques and strategies to bolster the growth of our project.

❖ Social media posts, activity, and shilling we be an ongoing operation to gain as much organic attention as we can

❖ Paid cryptocurrency influencer and enthusiast ads

❖ Attempt to gain partnerships with other coins, projects, and individuals.

❖ Banner ads on websites that are heavily trafficked by crypto users

❖ Giveaways and contests for those who hold and promote our coins

❖ Merch Store with our logo, mascot, and products

❖ Community voting, project participation, AMAs,

Here's what YOU can do to help promote us!

Like and share our social media post. Make posts on social media such as Twitter and Reddit discussing our coin or network. The biggest thing: Use our features and spread them around! When you want to link the chart of a specific coin, link our chart instead of others! Spread hype around upcoming features, and be active in the community.

Thank You for Your Interest!

Thank you for your interest in our project! Without community interest and engagement, we would not be able to grow and develop a successful network.

Our deepest thanks,
We could not do this without you.
